

PLACE VALUE

- Place value is what each digit is worth.
- Here is a chart to help see place values up to the thousands place.

Thousands	Hundreds	Tens	Ones
4	5	7	3

- In the number above (4,573), there are four thousands, five hundred

How to

- In our number chart, the thousands place is the leftmost column. The hundreds place is the second column from the left. The tens place is the third column from the left, and the ones place is the rightmost column. To find the value of a digit, count the number of places from the right. The digit's value would be the number of places from the right multiplied by the digit.
