

CONGRUENT SHAPES

- Congruent shapes are shapes that are the **exact same shape and size**.
- Congruent shapes can be rotated or reflected.

How to determine congruent shapes:

- When two shapes are congruent, they have the exact same size and shape.

For example:

- Congruent shapes can be the same size and shape, but be rotated.

For example:

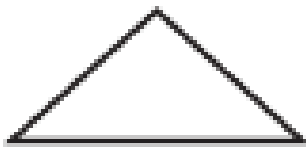

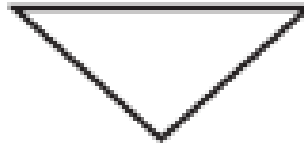

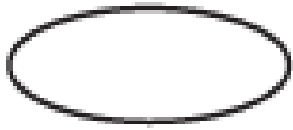

- Congruent shapes can be the same size and shape, but be reflected.

For example:

Try This!

Draw a line to match the shape with the shape that is congruent.
