

## PERIMETER

### What Is a Polygon?

**polygon** – a plane figure with three or more sides that are all straight.

**regular polygon** – a polygon which sides and angles are ALL equal.

### Calculating the PERIMETER of regular polygons:

The **perimeter** of a polygon is the SUM of all its length.

- To find the **perimeter** of a polygon, **ADD** the length of all the sides together.

*Example:*

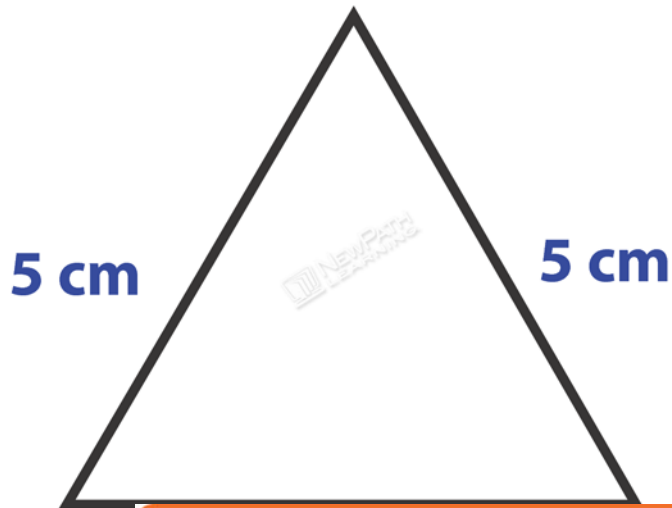

To find the perimeter of this square, we need to add the length of all its sides:

$$3 \text{ cm} + 3 \text{ cm} + 3 \text{ cm} + 3 \text{ cm} = 12 \text{ cm}$$

**The perimeter of this square is 12 cm.**

To find the  
its sides:

length of all

$$5 \text{ cm} + 5 \text{ cm} + 5 \text{ cm} = 15 \text{ cm}$$

**The perimeter of this triangle is 15 cm.**

## Calculating the PERIMETER of irregular polygons:

**irregular polygons** – a polygon that does NOT have all equal sides and angles.
