

## PLOT POINTS

**Coordinates** are used to describe the location of a point on a grid.

Let's plot **(3, 4)** on a grid below.

**(3, 4)** The first number of a coordinate tells you how many units to move to the RIGHT.

**(3, 4)** The second number of a coordinate tells you how many units to move UP.

## Plotting points to form basic geometric shapes:

What are the coordinates that form the square on the grid below?

Coordinates that form the square =  $(1,1)$ ,  $(1,4)$ ,  $(4,1)$ ,  $(4,4)$
