- ✓ Amphibians live part of life in water and part on land.
- ✓ When they live in water, they breathe through gills.
- ✓ When they live on land, they breathe through their lungs.

***Let's check what we have learned so far:
Name one detail about a reptile.***

How are animals different from each other?

Animals are similar in many ways, but they are also different too!

Here are some ways that animals can be different:

Where Animals LIVE:

- ✓ Some animals live on land (like a tiger), some animals live in the water (like a fish), and some animals live on land and in water (like a frog).
- ✓ Some animals live in places where it is very hot (like a camel), some animals live where it is very cold (like a polar bear), and some animals live in places where it is warm (like a squirrel).
- ✓ Some animals live in trees (like a bird), some animals live underground (like a groundhog), and some animals live in caves (like a lion).

How Ani

- ✓ Some animals look like their parents when they are born.

***Let's check what we have learned so far:
Name one way animals can be different.***

What Do Animals Need to Live?

- ✓ Animals need **water** to live.
- ✓ Animals need **food** to live:
 - * Some animals eat just plants (they are called herbivores).
 - * Some animals just eat other animals (they are called carnivores).
 - * Some animals eat plants AND other animals (they are called omnivores).
- ✓ Animals need **shelter** to live too.
- ✓ Lastly, animals need to breathe in **oxygen** to live.
