

RESOURCES AND ENERGY

What is Energy?

People all over the world use energy. Energy **powers** almost everything that we use. Many people use different resources to heat their homes, turn on their televisions, and drive their cars.

There are many different kinds of energy, from **gas to solar power**. Some energy resources are easily created and will never run out. Other resources will run out someday. This is why companies are trying to find new resources that are working or becoming more common. Some resources may become scarce.
